RMarkdown can also be parsed to PDF!

Below is the same markdown guide displayed under *markdown > text styles* except output to PDF.

Headers

Use between 1 and 4 leading **#** to make titles (largest to smallest).

Page title

Section

Subsection

Subsubsection

Page title

Section

Subsection

Subsubsection

Italic

Surround italic text with * or _.

This is italic and _so is this_

This is italic and *so is this*

Bold

Surround bold text with ** or __

This is bold and __so is this__

This is bold and **so is this**

links

Anything that looks like a URL will automatically be turned into a link.

```
http://www.google.com
```

http://www.google.com

You can make named links like so:

```
[Google](http://www.google.com)
```

[Google](http://www.google.com)

Block quotes

Preface lines with `>` to make block quotes.

```
> This is a quote,
> Which happens to appear on
> multiple lines
```

> This is a quote, which happens to appear on multiple lines

Verbatim blocks

To make text appear exactly as you type it...

```
This will be displayed exactly as formatted in the Rmd file.
```

Superscript

Surround text with with carets to make it a superscript.

```
pi * R^2^
```

pi * R^2

Superscript

Surround text with with carets to make it a superscript.

```
sub~script~
```

$\text{sub}_{\text{script}}$

Strikethrough

Surround text with two tildes to put a line through it.

```
~~strikethrough~~
```

~~strikethrough~~
